CARE AND MAINTENANCE

KIDS Basin Single Tap with Thermostatic Pre-mixer

B&M SKU: **ID01210/PT**

Routine cleaning

Wipe painted and chrome-plated surfaces with a soft cloth, warm water and a mild pH-neutral cleaner. Rinse and dry after cleaning to prevent residues and water marks.

Do not use

Do not use abrasive powders or pads, wire wool, bleach, strong acids or alkalis, solvents, paint removers, descaling products not approved for painted fittings, or metal tools. Do not spray chemicals directly into the aerator, cartridge or infrared sensor.

Operational care

Clean the aerator periodically and check for reduced flow. Inspect flexible hoses, isolation valves and all joints for leakage. For sensor models, keep the sensor window clean and replace the battery only with the specified type, observing polarity and keeping the waterproof housing sealed.

Thermostatic pre-mixer variants

For /PT variants, periodically verify the delivered mixed-water temperature and inspect the hot, cold and mixed connections. Any servicing or temperature adjustment must be performed by a competent person with suitable temperature-measuring equipment.

Important

Isolate the water supply before servicing. Use genuine compatible parts and retain the official technical, installation and spare-parts documents.
