

INSTALLATION INSTRUCTIONS

KIDS Ceramic Washing Trough 120 cm

B&M SKU: **ID10395** Idral code: **10395**

Before installation

Inspect the product and all supplied components. Confirm the model, dimensions, installation position and compatibility of taps, waste and plumbing. Protect finished surfaces and isolate the water supply where applicable.

Installation sequence

1. Verify the countertop cut-out and support arrangement against the actual trough and official dimensional drawing before cutting.
2. Provide a level, rigid and moisture-resistant supporting surface capable of carrying the trough when full and in use.
3. Dry-fit and centre the trough, allowing access for the central waste and siphon/trap below.
4. Apply a sanitary-grade sealant appropriate for vitreous china and the countertop material; bed and level the trough without point loading.
5. Connect the separately supplied waste, siphon/trap and taps. Do not overtighten fittings against the ceramic.
6. Allow sealant to cure, then test drainage and every connection for leakage.

Important

Installation must be carried out by a competent installer. Site conditions determine the required structural fixings. Stop work if the product is damaged, dimensions do not match, or the supporting construction is unsuitable.

Retain the official technical specification and proof of purchase. Damage caused by unsuitable cleaners, impact, incorrect installation or incompatible components is not a manufacturing defect.
